AXNOL DYNAMIC WEBSITE + APP

Axnol Lubetech is a digital platform designed to centralize the company's products, industries, company information, enquiries, dealer operations and digital content in one system. The solution will consist of a dynamic website, a React Native mobile application for Android and iOS, a Laravel-based backend/API, a Super Admin Panel and a permission-based Admin Panel.

📌 Project Description

To provide Axnol Lubetech with a centralized digital platform that supports product discovery, industry-wise product management, dealer management, pricing and discount requests, order and invoice management, technical document access, customer enquiries, and centralized business operations across the website and mobile application.

->Project Objectives

- Centralize product and company information.
- Make website content manageable through the admin system.
- Provide a structured product and technical-document catalogue.
- Manage dealer pricing and discount requests,invoices and order history.
- Provide controlled admin access through role and permission management.
- Provide a consistent mobile experience on Android and iOS.
- Receive and manage product and contact enquiries.

->Project Components

- Super Admin Panel
- Admin Panel
- Website
- Mobile App

📌 SYSTERM ARCHITECTURE OVERVIEW

Website
Dynamic Web Platform (Public)

- Company & Brand Information
- Products, Industries & Categories
- Product Enquiry (Dealers Only)
- Blogs, Clients, Team, Certificates
- Contact & CMS Management
- Dynamic Content (Managed from Admin)

Mobile App
Android & iOS (React Native) – Dealers Only

- Dealer Login & OTP
- Browse Products & Technical Documents
- Product Enquiry (Dealers Only)
- Invoice & Order History
- Profile Management
- Notifications (Order, Status, Updates)

GET IT ON Google Play | Download on the App Store

Super Admin Panel
Complete System Control

- Admin User Management
- Roles & Permission Control
- Master Data Management
- System Settings
- Activity Logs & Reports
- Full Platform Control

Admin Panel
Daily Business Operations

- Manage Products, Industries & Categories
- Dealer Management
- Pricing / Discount Requests
- Orders & Invoices
- Enquiries Management
- Website CMS (Pages, Banners, Blogs)

Backend / API
Business Logic & Data Processing

Laravel | REST API

Notification Service
Order, Enquiry & Delivery Updates (Email)

Email

Database & Core Services (Relational Database)

- Product Database
- Inventory Management
- Dealer Management
- Order Management
- Invoice Generation
- Document Management
- Delivery & Tracking

External Integrations (Optional)

- **Logistics / Delivery Partner** — Shipment Tracking (Delivery / BlueDart / Others)
- **Email Service** — Transactional & Notification Emails (Order / Enquiry / Updates)
- **Analytics & Reporting Tools** — Business Insights (Google Analytics / BI Tools)

📌 SCOPE OF WORK

The project includes the development of a complete digital platform consisting of a Super Admin Panel, permission-based Admin Panel, dynamic Website, and React Native Mobile Application for Android & iOS. The system will manage products, industries, dealers, pricing requests, orders, invoices, enquiries, and website content through a centralized Laravel backend. The website and mobile application will be connected with the backend to provide synchronized data and a consistent user experience.

The Axnol project consists of four major components:

Super Admin Panel

- The Super Admin Panel will serve as the central control system for the complete Axnol platform. It will manage products, users, Admin accounts, roles, permissions, website content, and mobile app data. All major platform operations, configurations, and settings will be controlled through the Super Admin Panel.

Admin Panel

- A permission-based management panel created and controlled through the Super Admin Panel. Admin users will be able to manage assigned modules such as dealers, products, industries, categories, pricing requests, orders, invoices, enquiries, and website content.

Website

- A dynamic and responsive website for presenting Axnol's company information, industries, products, technical details, blogs, clients, team, certificates, channel partners, and contact/enquiry functionality. Website content will be managed through the Admin Panel.

Mobile Application – Android & iOS

- A React Native mobile application connected with the Laravel backend, providing user/dealer login, profile management, product browsing, product details, pricing/request functionality, invoices, order history, documents, and notifications.

📌 Core Features

- Dashboard and business activity overview.
- User/dealer registration and login.
- User/dealer account activation and deactivation.
- Approve account through Admin.
- Search, filter and status management across major modules.
- Industry, category and subcategory management.
- Product catalogue management.
- Product technical details and document/PDF management.
- Product image, specification and technical document management.
- Dealer-wise product pricing and pricing approval workflow.
- Dealer profile and document management.
- Custom pricing / discount request management.
- Original price and dealer price management.
- Order management.Invoice generation and management
- Order history
- Order status and invoice tracking.
- Product enquiries
- Contact enquiries
- Dynamic website content management
- Blog management
- Client management
- Team member management
- Certificate management
- Channel partner management
- Dynamic slider/banner management
- Admin role and permission management
- Notifications
- Centralized Laravel backend and API
- Android and iOS mobile application
- Website banners, sections and promotional content management.
- Admin activity logs and system activity tracking.

📌 SUPER ADMIN PANEL

Purpose

The Super Admin Panel is the highest-level administration system of the platform. It provides complete control over administrative users, roles, permissions, master data, system settings, and overall platform activities.

Super Admin Modules

> Dashboard

- View overall system statistics and activity summary.
- Monitor users, dealers, products, requests, and orders.
- View important platform activities from a centralized dashboard.

> Admin Management

- Create new Admin users.
- Edit and update Admin information.
- Activate or deactivate Admin accounts.
- Manage basic Admin details such as:
- Name
- Email
- Phone Number
- Account Status

> Roles & Permissions

- Create and manage Admin roles.
- Assign specific permissions to each role.
- Control module-level and action-level access.
- Permissions can include:
- View
- Add
- Edit
- Delete
- Assign roles and permissions to individual Admin users.

BRANDIQ

> Master Data Management

- Manage the core master data used throughout the platform.
- Manage:
- Industries
- Categories
- Subcategories
- Statuses

> System Settings

- Manage common platform configurations.
- Manage company information.
- Manage contact information.
- Manage other required system configuration values.

> Activity / Logs

- Track important administrative activities.
- Maintain records of:
  - Admin/User
  - Module
  - Date & Time

> Admin Creation & Permission Flow

- Super Admin creates a new Admin account.
- Super Admin creates or selects an appropriate role.
- Required module and action permissions are assigned.
- Admin can access only the modules and actions assigned to them.
- Super Admin can update or modify permissions whenever required.

> Product Management

- Product creation
- Industry
- Category & Subcategory
- Technical PDF / Link

System Architecture

Admin Creation & Permission Flow

📌 ADMIN PANEL

Purpose

The Admin Panel will be used for the day-to-day management of the platform. Access to each module will be controlled through permissions assigned by the Super Admin.

Account Manage

- View all dealers.
- Search and filter dealers.
- View dealer details.
- Activate or deactivate dealer accounts.
- Manage basic information.

Dealer Listing

- View all dealers.
- Search and filter dealers.
- View dealer details.
- Activate or deactivate dealer accounts.
- Manage basic information.

Dealer Pricing

- Manage dealer-specific product pricing.
- View original product price.
- Set dealer custom price.
- Manage applicable discounts.
- Maintain product-wise pricing information.

Pricing Request

- View custom pricing/discount requests.
- Review dealer requests.
- View requested product and quantity/pricing details.
- Approve or manage the requested pricing.
- Track request status.

BRANDIQ

> Invoice

- Generate invoices for applicable orders.
- View invoice details.
- Manage invoice information such as:
  - Invoice Number
  - Order
  - Dealer
  - Items
  - Amount
  - Invoice Date

> Product Management

- Product creation
- Industry
- Category & Subcategory
- Technical PDF / Link

> Order History

- View dealer orders.
- View order details.
- Track order status.

> Report Management

- View and manage system-generated reports.
- Generate reports based on users, dealers, products, orders, enquiries, and activities.
- Filter reports by date, module, status, or user.
- View administrative and platform activity reports.
- Track module-wise activities and records.
- Export reports for further analysis and business use.
- Maintain records of Module, Activity, Date & Time.

- Manage Enquiry Content

System Architecture

Website (Public) | Mobile App (Dealers) → Admin Panel → Backend / API (Laravel, REST API) → Database (Relational)

📌 WEBSITE

Purpose

The website will be developed as a dynamic and responsive digital platform where company information, products, industries, and other website content can be managed through the Admin Panel.

It will provide users with easy access to company information, product details, industry-specific solutions, technical documents, and other relevant content.

The website will support product enquiries, contact enquiries, and content-driven sections, enabling users to interact with the company efficiently.

All website content will be centrally managed through the Laravel backend, ensuring consistent, accurate, and up-to-date information across the platform.

Website Pages & Modules

- Home
- About / Company
- Vision / Mission / Purpose
- Chairman Message
- Our People / Team
- Business Principles / Policies
- Certificates
- Industries
- Products
- Blogs
- Clients
- Channel Partners
- Product Enquiry
- Contact Us

Product Structure

Product Menu → Category → Subcategory → Product Page → Technical Details / PDF

BRANDIQ

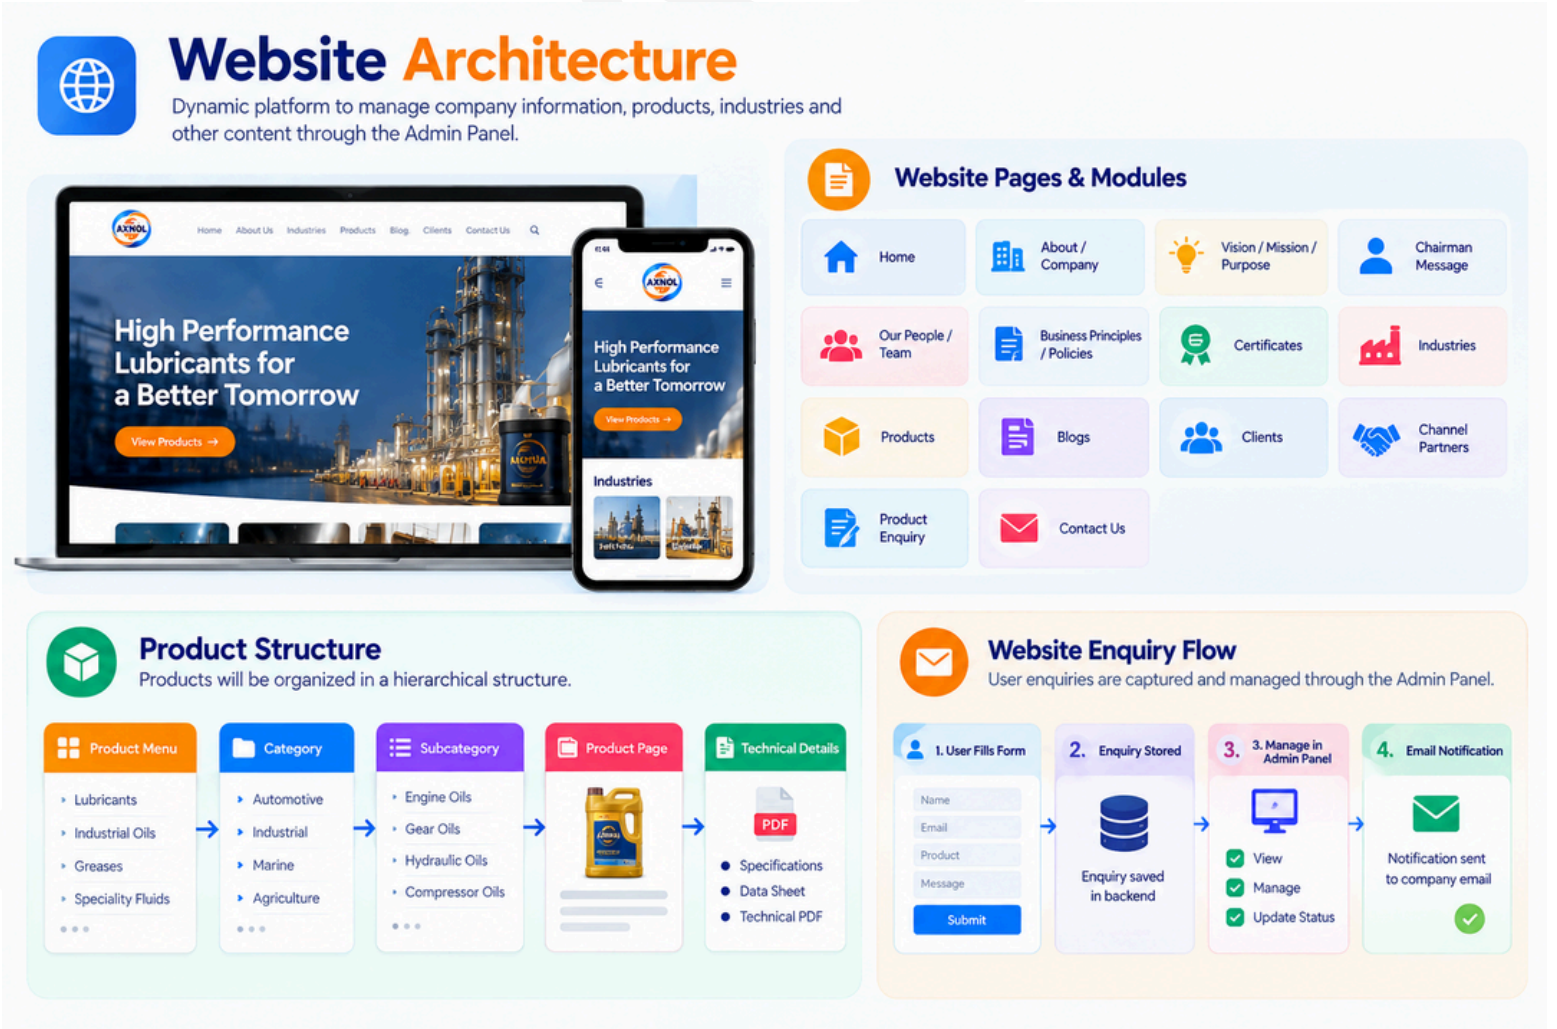

📌 WEBSITE

Website Enquiry Flow

- User opens the Product Enquiry or Contact form.
- User submits the required information.
- Enquiry is stored in the backend.
- Admin can view and manage the enquiry from the Admin Panel.
- Email notification can be sent to the designated company email.

Website Request Generation Flow

- Browse Product → Find the required product
- Send Enquiry → Submit quantity & contact details
- Admin Review → Enquiry received in Admin Panel
- Discuss & Finalize → Price, quantity & requirements
- Confirm Order → Order processing begins

📌 MOBILE APP

Purpose

The mobile application will be developed using React Native for both Android and iOS platforms and integrated with the Laravel backend through secure APIs. The application will provide users with seamless access to products, pricing requests, orders, invoices, and profile information.

The application will feature a simple, intuitive, and user-friendly interface, enabling users to efficiently browse products, submit requests, and manage their account activities.

All application data will be centrally synchronized with the Laravel backend, ensuring consistent, accurate, and up-to-date information across the platform.

> Mobile App Modules

- Authentication Module
- Home Module
- Product Catalogue Module
- Product Details Module
- Pricing Request Module
- Order & Invoice Module
- Profile Management Module
- Documents & Notifications Module

> Mobile App Features

- Login & Registration – Secure login, registration, OTP verification, and account recovery.
- Home – Featured products, industries, important updates, and quick access to key sections.
- Product Catalogue – Browse products by industry, category, and subcategory.
- Product Details – Product images, descriptions, specifications, pricing, and technical documents.
- Pricing Request – Submit and track product pricing or discount requests.
- Orders & Invoices – Manage orders, track status, and view generated invoices.

BRANDIO

- Profile Management – Manage personal/company details, address, and account information.
- Documents & Notifications – Access required documents and receive important platform updates.

> Platform

- Android Application
- iOS Application
- Developed using React Native
- Connected with Laravel Backend & APIs
- Centralized database and synchronized data
- Responsive interface optimized for different mobile screen sizes

> Login & Registration Flow

Open App → Login / Registration → Enter Details → OTP Verification → Account Approval → Profile Setup → Home

- User can register with the required personal/company information.
- Submitted account details are reviewed and approved by Admin where required.
- Approved users can log in and access the application features.
- Existing users can directly log in and manage their profile.

> Request Generation Flow

Login → Home → Industries → Products → Product Details → Pricing Request → Submit Request → Admin Review → Approved Price → Order

- User selects the required industry, category, and product.
- User views product details and submits a pricing/discount request.
- Request is stored in the Laravel backend and becomes available to Admin.
- Admin reviews the request and manages the applicable pricing.
- Approved pricing is reflected for the user and can proceed to the order process.

BRANDIQ

Mobile Application

Access products, request pricing, manage orders and invoices – anytime, anywhere.

Available on **Android**

Available on **iOS**

App Modules

All essential features to manage products, requests, orders and account details.

- **Authentication** — Login, Registration, OTP Verification
- **Home** — Featured products, industries & updates
- **Product Catalogue** — Browse by industry, category, subcategory
- **Product Details** — Images, specifications and technical documents
- **Pricing Request** — Submit & track product pricing or discount requests
- **Order & Invoice** — Manage orders, track status and view invoices
- **Profile Management** — Personal / company details, address and account info
- **Documents & Notifications** — Access documents and receive important platform updates

Custom Pricing for Each Dealer

Set individual product prices and discounts for different dealers.

Dealer A	₹ 2,000
Dealer B	₹ 1,800
Dealer C	₹ 1,950
Dealer D	₹ 2,100

- Different pricing for each dealer
- Manage discounts easily
- Flexible and customizable
- Helps in better business management

Request Generation Flow

Simple and easy process from enquiry to order.

Browse Products → Select Product → Send Enquiry → Admin Review → Finalize Pricing → Place Order

Powered by Secure Technology

Built with modern and reliable technology for a smooth and secure experience.

React Native (Android & iOS) ↔ **Laravel Backend** (Secure APIs) ↔ **Centralized Database** (Synchronized Data)

WORKFLOW

PROJECT DEVELOPMENT WORKFLOW

The Axnol project will follow a structured workflow from requirement planning and UI/UX design to development, testing, deployment, and final handover, with client approval at each major stage.

Workflow Steps

- Requirement & Planning – Finalize project requirements, user roles, modules, data structure, and complete system workflow.
- UI/UX Design – Design and approve the Website, Mobile App, Super Admin Panel, and Admin Panel screens and user flows.
- Development – Develop the approved designs, Laravel backend/API, Admin Panel, Super Admin Panel, Website, and React Native mobile application.
- Integration – Connect the Website and Mobile App with the Laravel backend, database, pricing, orders, invoices, enquiries, notifications, and other required functionalities.
- Testing & UAT – Test the complete system across Website, Android, iOS, Admin Panel, and Super Admin Panel. Fix issues and complete client acceptance testing.
- Deployment – Deploy the Laravel backend, Website, Admin Panels, and publish the Mobile Application for Android and iOS.
- Go-Live & Handover – Launch the complete system and provide required access, basic documentation, and project handover.

Note: Once UI/UX designs are approved, major design changes during development will be treated as additional requirements.
